

Quick Facts

Ignore those misleading US generated statistics; here's something real for Australian Business:

The following information is taken directly from the Australian Government, Office of the E-Safety Commissioner:

- *43 percent of cyber-attacks are targeted at small businesses*
- *Nearly 40 percent of scam attempts occurred through email, over the internet or through a social network platform*
- *Ransomware is one of the most frequent and damaging types of malware affecting businesses today.*
- *Having a plan in place can dramatically limit the damage, improve your recovery time and help safeguard your business.*

Business Continuity & Disaster Recovery

Protect Your Business From Down Time

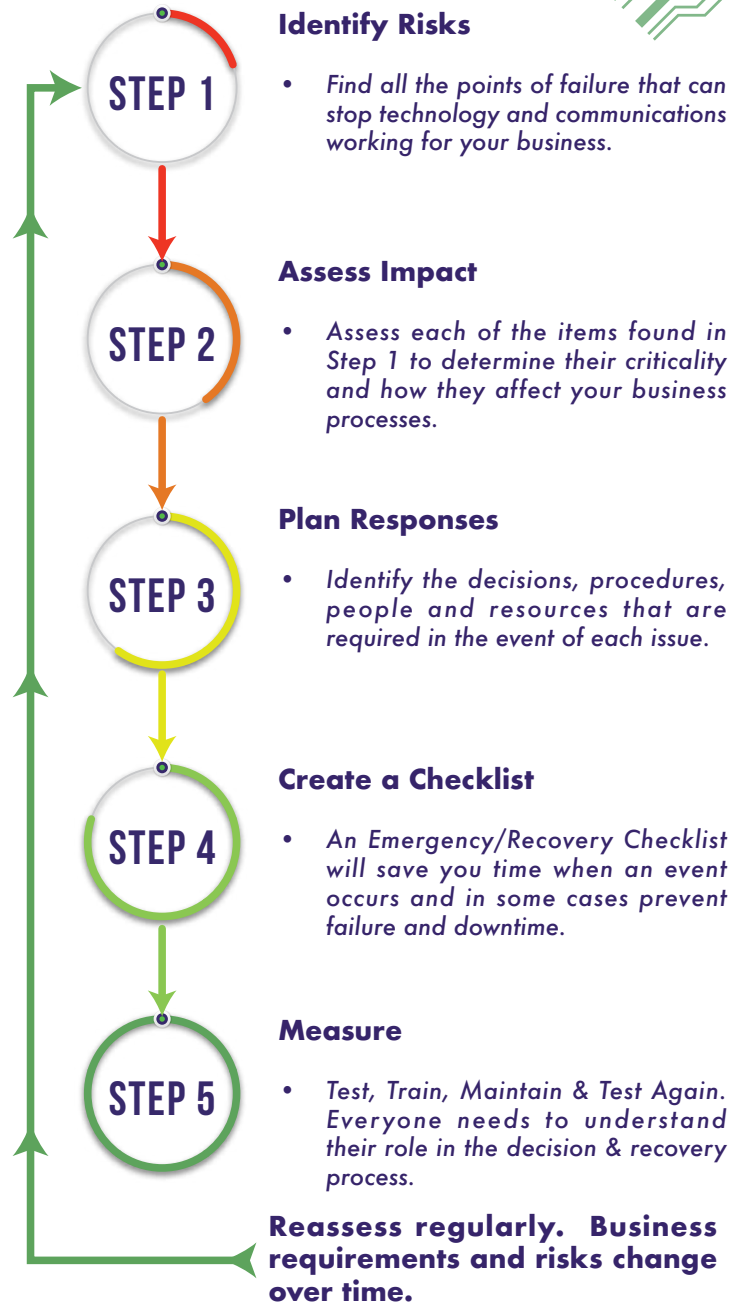

Ambient iT is a team of experienced professionals who will work with you to understand your business, identify your threats and hazards, and create a business continuity & disaster recovery plan that suits your specific needs. This will allow your team to quickly adapt to any technology roadblocks or issues and continue working when outage events occur.

Make your critical decisions while you are not under the stresses of a critical situation. If you plan ahead for all your critical points of failure your chances of minimising both risk and damage will be maximised.

Hear From Our Client:

"The recovery process was fast and pain free. No doubt made possible by the prior planning with the assistance of Ambient iT. We highly recommend planning your requirements, responses and actions in advance to minimize recovery time and stress. The best way to ensure a positive outcome."

Sonya Webby, CMBM Facility Services

The Real Cost of Technology Failure

Most small businesses only account for the cost of restoring their IT services in the case of a disaster.

Ambient iT can help you better understand the cost to your bottom line and reputation by not having your systems functioning when your clients need them. We can help you establish structure and process to minimize and even eliminate those risks and, where required, keep you up and running when disaster strikes.

External risk factors such as malware are ever expanding. Our business continuity plans go further to assess your vulnerabilities both internally and externally within your business to help keep you covered.

Is This For Me?

If you answer yes to any of the following then you should get in touch with us:

- Is your workforce mobile or working from multiple locations?
- Do you store company data locally, on a server or in the cloud?
- Would you like peace of mind when it comes to your data and intellectual property?
