# Protect from IT Uncertainty

## Monitoring & Maintenance

Looking after your operating systems and software helps minimize risk from threats and vulnerabilities.

Desktops and Servers can be managed to update regularly and monitor for changes and issues.

Monitoring includes checking critical functions and services to ensure your business is up and running.

## Office Productivity Suite and Cloud Services

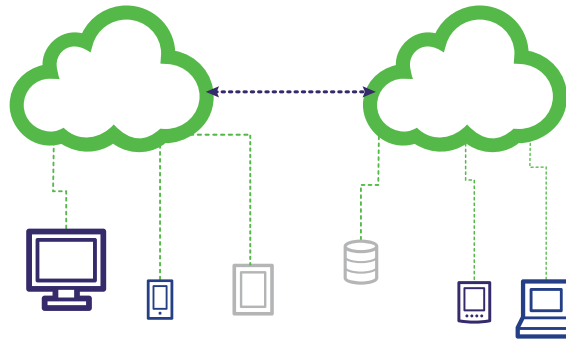

The best productivity tools for your team providing outstanding collaboration and communication unified in simple manageable and affordable packages.

With world class email and support for BYOD, a 99.95% uptime ensures your entire business is at your fingertips when you need it.

Additionally, first class mobile device management helps your business remain compliant and safeguards your data and intellectual property.

## Cloud Backups

**Warning!**... Never depend on one backup alone ... Any automatic transfer of already infected data can potentially corrupt the destination too.

### Onsite to Cloud and Cloud to Cloud

Storing your data in the cloud is not automatically safe. You still need backups to provide a safety net against failure of a storage location as well as bulk data corruption.

Ease of recoverability is important to ensure that the recovery time suits the operational needs of your business and does not result in costly unnecessary downtime.

### Check, Review, Test & Check Again

Even automatic processes must be checked regularly for failures and issues. Our skilled professional team manages this for you simply, cheaply & efficiently. Our regular monitoring keeps you safe and ensures things going silently awry behind the scenes are fixed quickly.

**Have your restore capabilities been tested recently?**

## Managed Anti-Virus

Unfortunately, anti-virus is like wearing a seatbelt. It's an essential protection but the worst can still happen. Business grade Anti-Virus and Anti-Malware solutions combined using market leader fast and efficient technologies provide the best protection you can get.

Using a managed solution provides an extra level of safety with Ambient iT monitoring your updates and scans remotely and enabling reporting across your organisation. This clarity and control helps keep you safe.

## Is This For Me?

- *Do you need to know that your systems and data are protected?*
- *Are you using the best tools for team collaboration and communication?*
- *Would you like peace of mind knowing that your systems and data are protected?*
- *Do you need to control your IT costs and not be shocked by large bills?*

**If you answer yes to any of these then you should get in touch with us.**
